

THE SAFE STOCK SELECTOR

a **5-point checklist**
to pick stocks with confidence

The Safe Stock Selector™

Use this **5-point checklist** to pick stocks with confidence.

✓ **Smooth & Steady Price Uptrend (“Sleep-At-Night” Stocks)**

- Look for a one-year chart that climbs steadily from lower left to upper right—like a smooth 45° angle.
- Calm charts = calm investors.
- Avoid: Choppy, sideways or volatile price patterns.

✓ **Stock Price Currently Rising (Newton’s 1st Law)**

- Price should be making higher highs and higher lows.
- A body in motion stays in motion—don’t fight the trend.
- Avoid: Stocks falling or stalling near resistance.

✓ **Earnings Are Rising (Earnings = Engine)**

- Forecasted EPS should be rising (or stable) over the last 12 months.
- Earnings is the engine that drives a stock price higher over time.
- Avoid: Companies with declining earnings.

✓ **Market Is on Your Side (Ride the Wave)**

- Only buy when the overall market is trending higher.
- Go with the flow—let the market’s momentum work for you.
- Avoid: Buying when the market is in a downtrend.

✓ **Follow-through Confirmed (Complete the Swing)**

- Today’s price is higher than yesterday’s close and higher than today’s open after 10:00 AM ET.
- Like a golfer finishing the swing—you wait for full motion, not just initial contact.
- Avoid: Buying stocks moving lower the day you want to buy it.
